Materials for Electrochemical Supercapacitors and Batteries

Guest Editors:

Dr. Bin Yao
Epstein Department of Industrial & Systems Engineering, Viterbi School of Engineering, University of Southern California, Los Angeles, CA 90089, USA

Dr. Liang Huang
National Laboratory for Optoelectronics, School of Optical and Electronic Information, Huazhong University of Science and Technology, Wuhan 430074, China

Prof. Dr. Yu Song
Department of Chemistry, College of Science, Northeastern University, Shenyang 110819, China

Deadline for manuscript submissions:
closed (10 November 2022)

Message from the Guest Editors

Increasing research on electrochemical energy storage systems is boosting the development of high-performance power sources. Electrochemical energy storage devices, including supercapacitors and batteries, represent the most state-of-the-art power systems for both electric vehicles and wearable electronics. Over the past two decades, a series of new materials have been successfully developed, including but not limited to those for electrodes, electrolytes, and separators. These advanced materials have demonstrated enhanced electrochemical performance and stability. Hence, we organized this Special Issue to provide a platform for researchers in this exciting field to share their most recent findings. We believe the publication of this Special Issue would attract the attention of a broad range of scientists and engineers toward the field of electrochemical energy storage.

It is my pleasure to invite you to submit a manuscript for this Special Issue. Submissions on any advances in materials related to supercapacitors and batteries are encouraged. Full papers, communications, and reviews are all welcome.

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.
Journal Rank: JCR - Q1 (Metallurgy and Metallurgical Engineering) / CiteScore - Q2 (*Condensed Matter Physics*)
