Novel Ceramic Materials for the Energy Transition

Guest Editor:

Prof. Dr. Jesus Gonzalez-Julian

Chair of Ceramics, Institute of Mineral Engineering, RWTH Aachen University, Forckenbeckstrasse 33, 52074 Aachen, Germany

Deadline for manuscript submissions:

closed (30 September 2021)

Message from the Guest Editor

Dear Colleagues,

The worldwide threat, high energy consumption, has to be tackled in different fields, but "energy transition" is essential. In that sense, new materials are demanded to increase the efficiency of power generation systems, to develop novel environmentally friendly approaches, and to reduce or even eliminate the carbon footprint during processing. Ceramics play a determinant role since they present high chemical stability under aggressive environmental conditions to increase the operating temperature, and consequently the overall efficiency. Furthermore, they have low density, which is critical for transportation and a unique combination of ionic and electronic conductivities.

This Special Issue embraces research on the processing, characterization, and properties of advanced ceramics for energy transition, including high-temperature materials (such as ceramic matrix composites, max phases, ultrahigh temperature ceramics, and thermal barrier coatings), Li- and Na- batteries, solid oxide fuel cells, gas separation membranes, CO2 capture, electrolysis, hydrogen production and storage, solar energy, photovoltaics, and nuclear fusion among others.

Editor-in-Chief

Prof. Dr. Maryam Tabrizian

1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada

2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The iournal covers twenty-five comprehensive biomaterials, energy materials, advanced composites. advanced materials characterization, porous materials, manufacturing processes and systems. nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials. materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. Materials provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
