Structure, Function and Mechanics of Low-Dimensional Materials and Their Assemblies

Guest Editors:

Prof. Dr. Xiaoyan Li

Department of Engineering
Mechanics, Tsinghua University,
Beijing 100084, China

Prof. Dr. Yang Lu

Department of Mechanical
Engineering, the City University of
Hong Kong, Hong Kong 999077,
China

Dr. Hui Wu

School of Materials Science and
Engineering, Tsinghua University,
Beijing 100084, China.

Deadline for manuscript
submissions:

closed (20 November 2022)

Message from the Guest Editors

In recent years, low-dimensional materials have become a class of emerging materials. Their sample sizes in one or more spatial dimensions are reduced to the nanoscale regime, leading to the unique size effects or confinement effects. Low-dimensional materials include zero-dimensional, one-dimensional and two-dimensional materials. Due to their unique size effects, low-dimensional materials have exhibited excellent mechanical, thermal, electronic, optical, and chemical properties. As a basic building block, low-dimensional materials can be integrated into three-dimensional (3D) macroscopic assemblies. These 3D macroscopic structures or materials have shown enhanced functions in the fields of energy storage, sensing, catalysis, and environmental protection.

Aiming at highlighting some important concepts and developments of low-dimensional materials and their assemblies, this Special Issue will focus on the microstructures, functions, and mechanical properties/behaviors of various low-dimensional materials and their assemblies.

Because of your expertise in low-dimensional materials and their assemblies, we cordially invite you to contribute a paper to this Special Issue.

Special Issue

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Maryam Tabrizian

1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada

2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
