### Message from the Guest Editor

Catalysis has always played a major role in the field of energy, especially for developing new, sustainable energy sources and carriers.

Today many efforts are dedicated to make hydrogen H<sub>2</sub> one of the most important sustainable energy carriers. It has to be generated from a hydrogenated source through a chemical process, and catalysis, especially metal-based heterogeneous catalysis, is greatly important, even central, to the process.

The present Special Issue is focused on the central role of metal-based heterogeneous catalysis and photocatalysis in the production/generation of H<sub>2</sub> from a wide variety of sources. It is our pleasure to invite you to submit a manuscript for this Special Issue. Full papers, communications, and reviews... are welcomed.
