Message from the Guest Editor

Dear Colleagues,

Friction stir welding and processing (FSW&P) are solid-phase joining/processing technologies. FSW is arguably the most important welding innovation in the last few decades, and produces joints through local thermal-mechanical processes followed by material recrystallization. Based on the same physical and metallurgical principles, FSP was derived from FSW and can be classified as many technologies, such as friction stir surface treatment, friction stir cladding, friction stir extrusion, friction synthesis, and friction stir additive manufacturing. Because of the solid-phase metallurgical process and material recrystallization, welded/processed materials after FSW&P generally possess equiaxed fine-grain microstructures and excellent mechanical properties. Moreover, FSW can effectively join some materials which were traditionally categorized as having poor weldability by fusion welding.

This Special Issue intends to collect the newest developments in friction stir welding and processing.

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q1 (Metallurgy and Metallurgical Engineering) / CiteScore - Q2 (*Condensed Matter Physics*)
