Special Issue

Nanobiomaterials in Microbiology and Immunology

Message from the Guest Editors

The field of nanobiomaterials has developed rapidly and continuously in recent years. Innovative techniques have emerged to facilitate the precise manipulation of materials at the nanoscale, providing diverse applications for the biomedical field. When introducing an external material into the mammalian body, the most important challenge is to determine if the body will develop an immune response. Another challenge that researchers need to face is microbial contamination and biofilm development risk, knowing that microbial adherence is in proportionally inverse ratio with the compatibility of foreign biomaterial with host tissues. It is well known that any material to be introduced into the body needs to be sterile, and accidental microbial colonization must be avoided. Numerous antimicrobial nanosystems have been developed based on materials tailored at the nanoscale. This Special Issue aims to provide an updated collection of papers, showing the most relevant progress made in the field of development and characterization of nanobiomaterials, targeting their applications in different prosthetic or therapeutic device production with anti-inflammatory and antibiofilm properties.

About the Journal

Message from the Editorial Board

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Editors-in-Chief

Prof. Dr. Maryam Tabrizian
1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada
2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Prof. Dr. Yuguang Ma
State Key Laboratory of Luminescent Materials and Devices, South China University of Technology, Guangzhou 510640, China

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Condensed Matter Physics)
