Department of Computational
Modeling and Simulation
Engineering, Old Dominion
University, Suffolk, VA 23435, USA

Deadline for manuscript
submissions:

closed (31 August 2024)

Message from the Guest Editors

Dear Colleagues,

Today, blockchain technology (BCT), internet of things (IoT), and artificial intelligence (AI) are recognized as innovations that have the potential to improve current business processes, create new business models, and disrupt whole industries.

IoT devices in smart systems typically generate massive amounts of data. These data are often stored and processed in a centralized server. Blockchain technology could help with data standardization by setting up a harmonized digital platform for IoT data accessible to multiple parties. Due to the use of hash functions, data on blockchain systems is typically stored in one data format. Consequently, data management could be optimized by increased interoperability of stored data. Converging technologies such as BCT and/or AI/ML with IoT systems could make data management more scalable, secure, and efficient. In addition, AI offers an intelligent learning mechanism from the massive amount of time-series real-life data. Combined with AI and/or Blockchain, any smart system can address the many existing challenges.

This Special Issue is dedicated to novel articles covering BCT, AI, and ML methodologies in smart systems.

an Open Access Journal by MDPI

School of Computer Science and
Informatics, De Montfort
University, The Gateway,
Leicester LE1 9BH, UK

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

Journal Rank: JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)
