# Computational Aspects of Quadratic and High-Order Residues with Applications in Cryptography

Guest Editor:

## Prof. Dr. Ferucio Laurentiu Tiplea

Department of Computer Science, Alexandru Ioan Cuza University of Iasi, Iasi 700506, Romania

Deadline for manuscript submissions:

closed (20 September 2022)

# **Message from the Guest Editor**

Quadratic and high-order residues have increasingly caught researchers' attention due to their applications in computational number theory and especially in cryptography. Some of the fields where they have produced useful results are primality testing, pseudorandom generators, public-key cryptography, secure multiparty computation, etc. However, intense research is still needed to clarify various computational aspects and make them more efficient in cryptographic applications.

This Special Issue aims to bring together original contributions to the understanding of the computational aspects of quadratic and high-order residues and their applications in cryptography. Areas of interest include but by no means are restricted to:

- 1. Efficient computation of high-order residues;
- 2. Distribution of quadratic and high-order residues;
- 3. Sums of residues and non-residues;
- 4. Signed residues;
- 5. High-order residuosity problem and its relations with other computationally hard problems;
- 6. Applications in cryptography (pseudo-random generators, public-key cryptography, secure multiparty computation, signcrytion, etc.).

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The iournal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering sociology. particularly those that and stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

**Journal Rank:** JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)
