submissions:

**closed (30 June 2023)**

### Message from the Guest Editor

Dear Colleagues,

Many researchers and scholars assume that ontic vagueness (i.e., vagueness in the world) is real. Fuzzy sets are a mathematical model of vagueness and, according to ontic vagueness, fuzzy mathematics can be used to describe the world. Since computing is pervasive in all sciences, the question is how fuzzy sets and computing can be used to better describe the world. Therefore, models or ideas that would allow us to better approach whatever one may call physical reality are extremely useful. With this message, I invite you to contribute your important work in the broader area of fuzzy mathematics and computing with possible applications in physics, chemistry, biology, etc.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

**Journal Rank:** JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)
