Message from the Guest Editors

Dear colleague,

This Special Issue, “Control Theory and Applications”, addresses researchers working in the field of mathematical methods applied in control theory. The main aim of this Special Issue is to collect research articles in which the latest advances in the mathematical methods and procedures applied in control theory are approached. The problem of highlighting the efficiency of the proposed solutions by applying them in the case of practical applications is also covered. This Special Issue is dedicated to a large range of scientific subjects, including mathematical modelling, controllers design using advanced mathematical methods, numerical simulation, artificial intelligence, and control application. Mathematical methods and procedures represent some of the most efficient solutions for improving the design of the current controllers and control strategies in order to obtain better control performances.

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

Journal Rank: JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)
