Message from the Guest Editors

The purpose of this special issue is to contribute to the queueing theory and stochastic models with novel papers.

Nowadays, some concepts such as sojourn times and busy periods have become quite relevant due to their importance in traffic engineering, telecommunications and computer systems.

As for the time concept in queueing systems, let us note that these systems have been traditionally considered in a context of continuous time but in the last two decades there has been an increasing interest in the study of discrete-time queueing systems since they are more suitable than their continuous counterpart for computer modelling and telecommunication systems.

Any relevant papers related to the queueing systems and stochastic models are welcome.

an Open Access Journal by MDPI

Informatics, De Montfort
University, The Gateway,
Leicester LE1 9BH, UK

Message from the Editor-in-Chief

The journal *Mathematics* publishes high-quality, refereed papers that treat both pure and applied mathematics. The journal highlights articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, statistics, finance, computer science, engineering and sociology, particularly those that stress analytical/algebraic aspects and novel problems and their solutions. One of the missions of the journal is to serve mathematicians and scientists through the prompt publication of significant advances in any branch of science and technology, and to provide a forum for the discussion of new scientific developments.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), RePEc, and other databases.

Journal Rank: JCR - Q1 (Mathematics) / CiteScore - Q1 (General Mathematics)
