submissions:

**closed (15 November 2022)**

### Message from the Guest Editor

Dear Colleagues,

Discontinuous Galerkin methods are widely employed in computational science and engineering fields, as they offer accurate and efficient simulations. The development, analysis and applications of discontinuous Galerkin methods have thus stimulated significant research. This Special Issue aims to create a platform for papers for the exchange of knowledge on all aspects of discontinuous Galerkin methods.

This Special Issue will present the latest scientific advances, reviews, communications, and short notes considering discontinuous Galerkin methods.

Prof. Dr. Eric Chung
