Message from the Guest Editor

Dear Colleagues,

Sports medicine is one of various subspecialties in orthopaedic medicine that manages the physical fitness, preventive care, and treatment of various athletes in the field of sports and exercise. Orthopaedic surgeries have been a core treatment for acute and chronic sports-related injuries, and numerous surgical procedures have been developed depending on the nature of the injuries. Recently, various surgical techniques, regarding musculoskeletal sports-related injuries, have been introduced with satisfactory clinical outcomes. In this Special Issue of *Medicina*, we intend to introduce cutting-edge surgical concepts and techniques related to sports-related injuries and disorders. We would like to invite authors to submit their original research articles, meta-analyses, review articles, technical notes, and case reports regarding orthopaedic surgeries in sports medicine. This Special Issue invites articles on shoulder, elbow, hand and wrist, hip, knee, foot and ankle, and spine surgeries related to sports-related injuries and disorders. This Special Issue also covers clinical outcomes of various orthopaedic rehabilitations on sports-related injuries.
