submissions:

15 December 2024

Message from the Guest Editors

The main pathologies affecting the retina are diabetic retinopathy, age-related macular degeneration, premature retinopathy, and glaucoma. The latter is often considered a class per se because of a completely different etiology; however, it primarily involves the retinal ganglion cells and so must be included within the group of retinopathies.

In this Special Issue we intend to present the most recent knowledge on the etiology of each one of these pathologies, from which new therapeutic targets should emerge. Additionally, we intend to solicitate a new way to look at them, proposing new therapeutic approaches and innovative treatments, even at the hypothetic level, in order to stimulate and promote new research, hopefully leading to more efficient ways to fight these diseases.

Another point, equally critical, is the way to obtain an early diagnosis of the disease before it becomes clinically relevant in order to start possible non-invasive treatments able to delay progression as much as possible.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
