Message from the Guest Editors

Dear Colleagues,

Anterior Cruciate Ligament (ACL)-related pathology is one of the main research topics in orthopedics with more than 2700 articles published on PubMed alone. However, interest in this area of orthopedic surgery and related specialties is as strong as ever, or maybe even stronger. Advances have been made in surgical anatomy, biomechanics, injury prevention, treatment and rehabilitation. Over the years, surgical techniques have evolved from trans-tibial reconstructions to anatomic positioning of the tunnels, single and double bundle reconstructions, graft options have evolved from bone-patellar tendon-bone autografts to hamstrings and, more recently, quadricep tendon grafts, from autografts to allografts. More recently, there has been great interest on primary repair and augmentation techniques.

With this Special Issue, we are focusing on ACL-related research from injury to treatment and rehabilitation, and we are welcoming submissions from all authors taking an interest in this subject.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
