### Message from the Guest Editors

The prevalence of diabetes has risen dramatically for decades, being one of the most important health problems in modern society. According to the WHO, 422 million people worldwide have diabetes, and 1.6 million deaths are directly attributed to diabetes each year. The presence of diabetes could lead to serious long-term complications, such as cardiovascular disease, diabetic retinopathy, or kidney failure. The current obesogenic environment, favoring non-healthy food intake, physical inactivity, and circadian misalignment (a mismatch between endogenous circadian rhythms and behavior) is a major driver of the growing diabetes epidemic. In addition, genetic variants in specific genes exhibit significant associations with diabetes, although the underlying mechanisms have not been fully elucidated. With these premises, the need arises for more exhaustive approaches focused on the study of lifestyle factors—mainly diet, physical activity, or sleep patterns—or genetic factors in diabetes, as well as the interaction between both to rigorously predict the risk of developing diabetes and optimize its treatment once diagnosed.

## Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

**Journal Rank:** JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
