Message from the Guest Editors

Dear Colleagues,

The treatment of gastric cancer has been changing during the last 10 years. The multimodal approach is offering innovative treatment options with improved prognosis also in Stage IV patients. On the other hand, technological advances are promoting the diffusion of minimally invasive treatments, exploiting robotics, augmented reality, and artificial intelligence.

This Special Issue aims to explore the latest updates in the management of gastric cancer, focusing on the multimodal, molecular-based, and surgical treatment of these patients.
