Message from the Guest Editors

Musculoskeletal disorders (MSD) are associated with various degrees of disability, particularly in the elderly population, thus affecting participation in activities of daily living (ADL) and the overall quality of life (QoL) of affected individuals. MSD pose a significant burden to health systems, social care systems and caregivers. Such disorders encompass a diverse group of conditions affecting bones, muscles and joints, including degenerative conditions, inflammatory rheumatic diseases, fragility conditions and several types of bodily pain. Common musculoskeletal degenerative conditions in the elderly population include osteoporosis and osteoarthritic changes in the joints and spine. Furthermore, MSDs are common in multimorbidity; therefore, proper diagnostic and therapeutic approaches carried out by a multiprofessional team are vital for optimizing treatment course and outcomes.

The purpose of this Special Issue is to present current and experimental diagnostic and therapeutic modalities, as well as preventive measures for improving the functioning and overall quality of life for individuals with MSD.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
