Message from the Guest Editor

Neuromuscular disorders (NMDs) encompass a range of conditions that impair the function of muscles or the nerves that control them. Over the years, the diagnostic tools used to understand and treat NMDs have evolved from mere early observations of muscle weakness and wasting through rudimentary physical examinations to the advanced molecular techniques such as sophisticated imaging and genetic testing. These advancements have helped clinicians and researchers to better understand the pathophysiology behind these disorders.

The primary aim of this Special Issue ‘Neuromuscular Disorders: Diagnostical Approaches and Treatments’ is to provide a platform for presenting the latest research, innovations, and findings in the diagnosis, understanding, and treatment of NMDs, along with addressing the socio-economic impacts, patient care and rehabilitation strategies. We will accept submissions of papers covering a broad spectrum of conditions, ranging from common ones such as myasthenia gravis to rarer disorders.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
