Message from the Guest Editor

Dear Colleagues,

Sports neurology is a relatively new subspecialty within the field of neurology. It specifically addresses the neurologic aspects of sports and sports-related injuries. Concussion and traumatic sports encephalopathy might be the first topics that come to mind but the field of sports-related neurologic injuries includes spinal cord injuries, peripheral nerve injuries, nerve entrapment syndromes and dystonia.

However, the topics in this Special Issue should not be limited to the management and prevention of injuries and overload syndromes of the central or peripheral nervous system. There are many people suffering from neurological conditions such as seizures, stroke, Parkinson's disease, multiple sclerosis or cerebral palsy, who want to get involved with sports. In addition to this, there are athletes with neurological conditions competing at a high level within their sport. We also welcome articles reporting on sports activity in myopathies, neuropathies and cerebral palsy. Many children have been excluded from sports activities in school in the past as a result. Another important topic is the effect of extreme sports and weight cutting on the brain.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
