### Message from the Guest Editor

Dear Colleagues,

Gastric interventions in the last two decades have dramatically improved with the expansion of minimally invasive procedures such as interventional endoscopy and laparoscopic surgery. Improvement in diagnostic examinations such as high-quality upper-GI endoscopy has led to increased detection of preneoplastic lesions and early neoplastic lesions (i.e., high-grade dysplasia lesions, NET, early gastric cancer) for whom interventional endoscopy has a pivotal treatment role. Combined endoscopic and surgical approaches are also essential in specific situations such as the management of bariatric complications, GIST treatment, and peptic or caustic complications.

We are pleased to invite you to submit to this Special Issue, which aims to explore the most recent evidence in the literature about endoscopic and laparoscopic interventions in gastric diseases. For this Special Issue, original research articles, case reports, and reviews are welcome. Research areas may include (but are not limited to) the following: gastric preneoplastic and early neoplastic lesions, bariatric intervention, peptic and caustic complications, and advanced endoscopic therapies.

## Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

**Journal Rank:** JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
