### Message from the Guest Editors

Lymphoedema remains a complex and challenging condition, often resistant to traditional treatments. With our deepening understanding of this disease, surgical interventions have become increasingly vital, especially for patients who have exhausted conservative options. Recent breakthroughs in microsurgery, supermicrosurgery, and lymphaticovenular anastomosis are transforming patient care, offering new possibilities for improved outcomes and an enhanced quality of life.

In this Special Issue, we aim to gather pioneering research and clinical insights that push the boundaries of what is possible in lymphoedema treatment. This issue will explore the latest surgical techniques, their practical applications, and their integration into comprehensive care plans, with a particular interest in studies addressing patient selection, perioperative strategies, and long-term outcomes.
