Message from the Guest Editors

Dear Colleagues,

Ocular surface health is important in maintaining normal vision and may be affected by several disease processes including dry eye disease, which is now one of the most prevalent ophthalmic conditions globally. Its growth has been driven by factors including the rapid increase in the use of electronic devices and an ageing population.

Medical management of ocular surface diseases can help to reduce inflammation, resolve infection, improve the tear film, and alleviate patient symptoms. Treatment options include topical and systemic medications, light therapies, and lifestyle adjustments. Ocular surface diseases are often multifactorial and thus require a multifaceted treatment approach. The development of long-lasting therapies is vital for the effective management of the chronic ocular surface diseases.

The objective of this Special Issue on 'Clinical Management of Ocular Surface Disease' is to summarize the frequently encountered ocular surface diseases and the latest developments in their diagnosis and treatment as well as emerging management options.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), and [other databases](#).

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
