Prof. Dr. Shigeaki Inoue

Department of Disaster and Emergency Medicine, Kobe University Graduate School of Medicine, Kusunoki-cho 7-5-2, Chuo-ward, Kobe, Japan

Deadline for manuscript submissions:

31 October 2024

Message from the Guest Editors

Traumatic injury is a leading cause of death and disability, particularly among young people, and it carries with it a substantial economic burden for society. According to the World Health Organization, more than 5 million people die annually as a result of traumatic injuries, which accounts for 9% of the world's deaths. This makes traumatic injury a major public health concern worldwide, and one that requires increasing attention.

In this Special Issue of *Medicina*, we aim to publish articles on the current therapies for trauma and surgical critical care in as broad a context as possible to provide readers with a comprehensive overview of the latest developments.

Clinical and experimental scientific research regarding innovative approaches to trauma resuscitation are welcome.

Case reports, retrospective and prospective case series and studies, literature reviews, opinions, and clinical and basic scientific research are all welcome.

The goal of this Special Issue is to improve the resuscitation of injured patients by gathering high-quality evidence of the best approaches.
