Message from the Guest Editors

Dear Colleagues,

Breast cancer treatment has changed dramatically in the last 50 years. The advancement of technologies and better patient management have made new strategies possible for breast reconstruction. Breast reconstruction is an integral part of “breast cancer treatment” in many countries. Many techniques have been introduced, and all of them have strengths and weaknesses that should be carefully investigated.

In light of this, there is concern about different access to the most advanced and expensive treatments for breast reconstruction due to social disparities.

The use of biomaterials, such as acellular dermal matrices, and microsurgical reconstruction represent a burden on health systems and are not accessible for everyone.

The final step of breast reconstruction is the nipple–areola complex reconstruction; this is a very important surgical procedure for which a lot of techniques have been described. Clarity is needed on this topic, based on scientific evidence.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
