Deadline for manuscript submissions:

closed (15 November 2021)

Message from the Guest Editor

Dear Colleagues,

Osteoarthritis (OA) is the most common form of arthritis. The key risk factors for the development of OA are age, obesity, joint trauma, and instability. There is increasing emphasis on the early detection of OA, as it has the capacity to target and treat the disease more effectively.

This Special Issue of Medicina is dedicated to recent progress in the field of OA biomarkers and aims to cover recent advances in identifying and validating new OA biomarkers using high throughput omics technologies that enable deep phenotyping in OA and to learn more about early events in the pathogenesis of the disease.

We welcome basic, translational, and clinical studies focusing on osteoarthritis biomarkers. Work that describes biomarker identification, characterisation, validation, and qualification is suitable for this Special Issue.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius Medical Academy, Lithuanian University of Health Sciences, Kaunas, Lithuania

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed,

MEDLINE, PMC, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General

Medicine)
