Message from the Guest Editors

Dear Colleagues,

Cancer is one of the leading causes of death worldwide. Accurate diagnosis, staging and restaging are essential for the optimal management and therapeutic choice for oncological patients.

Nowadays other more specific radiotracers (like choline, PSMA, DOTA-peptides) and new scanners (PET/MRI) have been developed with promising evidence; however, the role of 2-[18F]-FDG PET/CT remains fundamental and widespread. Moreover, several areas of interest are yet to be widely investigated.

This Special Issue will highlight the role of 2-[18F]-FDG PET/CT for the study of oncological diseases. We encourage authors to submit both preclinical and clinical studies in the field. Clinical studies may include systematic reviews, retrospective studies, and prospective studies emphasizing the role and need of 2-[18F]-FDG PET/CT in oncology.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank: JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
