Advanced Membrane Technology for Hydrogen Production and Carbon Capture

Guest Editors:

Dr. David Alique

Department of Chemical, Energy and Mechanical Technology, Rey Juan Carlos University, C/Tulipán s/n, 28933 Móstoles, Spain

Dr. Neng Huang

Institute for Decarbonization and Energy Advancement, Stanley and Karen Pigman College of Engineering, University of Kentucky, Lexington, KY 40506, USA

Dr. Pom Kharel

Institute for Decarbonization and Energy Advancement, University of Kentucky, Lexington, KY 40506, USA

Deadline for manuscript submissions: 10 December 2024

Message from the Guest Editors

Hydrogen and carbon are two key elements in the global energy transition. Hydrogen, as a clean and renewable energy carrier, can be used for various applications, such as fuel cells, power generation, and chemical synthesis. Carbon dioxide, as a major greenhouse gas, can be captured and stored from industrial sources to mitigate climate change; however, both face significant technical and economic challenges, which require advanced membrane technology to overcome. The Special Issue invites manuscripts solicited on the topical interest areas of (i) design and synthesis of novel membranes with enhanced properties, (ii) characterization and modeling of membrane performance and transport mechanisms, (iii) evaluation and comparison of membrane-based technologies with conventional methods, (iv) membrane fuel cells for energy production, (v) membrane-based electrochemical reactors for carbon utilization, and (vi) development of robust electrocatalyst membrane assembly for hydrogen production.

Editor-in-Chief

Prof. Dr. Spas D. Kolev

School of Chemistry, The University of Melbourne, Melbourne, VIC 3010, Australia

Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375).

Membranes is an international, peer-reviewed open accessjournal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and nonbiological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Physical*) / CiteScore - Q2 (*Chemical Engineering* (*miscellaneous*))
