Hollow Fiber Membrane Science and Technology—Novel Trends and Development

Guest Editors:

Dr. Loreto García Fernández

Department of Structure of Matter, Thermal Physics and Electronics, Complutense University of Madrid, 28040 Madrid, Spain

Dr. Omayra Beatriz Ferreiro Balbuena

Departamento de Ingeniería y Tecnología de Alimentos, Universidad Nacional de Asunción, San Lorenzo 111421, Paraguay

Deadline for manuscript submissions:

closed (20 September 2024)

Message from the Guest Editors

Dear Colleagues,

Membrane technologies using hollow fibers for different separation processes are of current interest to researchers since this membrane geometry enables the enhancement of applied process productivity, making its industrial implementation attractive. This Special Issue is a knowledge platform that aims to bring together all the recent advances in the broad scope of hollow fiber membrane science (i.e., design, preparation, modification and characterization of membranes including novel and green materials, as well as innovative fabrication and modification techniques), hollow fiber membrane module engineering (e.g., module size and structure optimization, membrane packing methodologies and packing density, module recycling, etc.), and hollow fiber membrane technologies for different applications (e.g., water purification, wastewater treatment, industry effluent treatment, gas separation, capture and storage, biomedical applications, etc.).

Original research articles, case studies, reviews, and communications about experimental or theoretical studies as well as simulations related to hollow fiber membranes and their applications are welcome and encouraged.

School of Chemistry, The
University of Melbourne,
Melbourne, VIC 3010, Australia

Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375).

Membranes is an international, peer-reviewed open access journal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and non-biological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Physical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
