2. Dept of Applied Mathematics, Illinois Institute of Technology, Chicago, IL 60616, USA

#### Message from the Guest Editors

This special issue is devoted to the numerical modelling of membranes across multiple length scales. One of the main goal is to demonstrate the need of model-based design and control strategies as the route for improving the performance, reliability and robustness of the electrochemical membranes. Topics covered in this issue include, but are not limited to:

- mathematical modeling of electrochemical and biological membranes;
- ion-selective membranes used in electrochemical sensors;
- numerical methods;
- experimental verification of the models and
- the inverse problems.

Deadline for manuscript submissions: closed (20 December 2021)

#### Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375).

*Membranes* is an international, peer-reviewed open accessjournal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and nonbiological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (Polymer Science) / CiteScore - Q1 (Chemical Engineering (miscellaneous))
