Design of Novel Target-Oriented Chemotherapeutic Anti-cancer Agents with ADME Pharmacokinetics

Guest Editors:

Dr. Mohamed S. Nafie

Department of Chemistry,
Faculty of Science, Suez Canal
University, Ismailia 41522, Egypt

Dr. Ahmed A. Al-karmalawy

Pharmaceutical Chemistry
Department, Faculty of
Pharmacy, Ahram Canadian
University, 6th of October City,
Giza 12566, Egypt

Deadline for manuscript
submissions:

closed (31 July 2023)

Message from the Guest Editors

Dear Colleagues,

Cancer is the second-leading cause of death worldwide. Anti-cancer activity presents a promising area of research for finding effective and selective anti-cancer agents. In the context of updated and continuous drug discovery, "computer-aided drug design" (CADD) refers to a wide variety of theoretical and computational methodologies that have been employed in predicting the three-dimensional molecular structures of receptors, enzymes, and nucleic acids as molecular models of drug-receptor complexes for designing novel inhibitors with altered recognition and receptor-affinity properties. CADD helps in finding rationalized synthetic compounds or semisynthetic natural compounds against apoptosis, angiogenesis, and metastasis downstream signaling pathway. Additionally, rationalized design helps in studying drug metabolism, drug-target interactions, and ADME pharmacokinetics.

Therefore, this Special Issue deals with designing novel chemotherapeutic agents (synthetic- or natural-based compounds) against both cellular and molecular pathways as selective anti-cancer agents.

Editor-in-Chief

Dr. Amedeo Lonardo

1. Formerly Director of the Simple Operating Unit "Metabolic Syndrome", Azienda Ospedaliero-Universitaria, 41126 Modena, Italy
2. Formerly Professor of Internal Medicine, School of Specialization of Allergology and Clinical Immunology, University of Modena and Reggio Emilia, 41121 Modena, Italy

Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Biochemistry and Molecular Biology*) / CiteScore - Q2 (*Endocrinology, Diabetes and Metabolism*)
