

Special Issue

Veterinary Drug Residue Detection and Pharmacokinetics

Message from the Guest Editors

Qualitative analysis of veterinary drugs is a necessary means for pharmacokinetic research. As a discipline to study on the temporal change of drug concentration, it is extremely important to accurately detect the drug concentration in tissues and organs. This Special Issue of *Metabolites* will publish reviews and original articles covering the latest development of the study on veterinary drug residue detection and pharmacokinetics in livestock, poultry, aquatic animal, etc.

About the Journal

Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

Universitaria, 41126 Modena, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q2 (Endocrinology, Diabetes and Metabolism)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2024).
