

Feature Paper Collection of “Current Challenges in Corrosion Research” (2nd Edition)

Guest Editors:

Prof. Dr. Belén Díaz Fernández

Department of Materials Science
and Engineering, University of
Vigo, 36310 Vigo, Spain

Prof. Dr. Jianqiang Wang

Shenyang National Laboratory
for Materials Science, Institute of
Metal Research, Chinese
Academy of Sciences, Shenyang,
China

Prof. Dr. Branimir N. Grgur

Faculty of Technology and
Metallurgy, University of
Belgrade, Karnegijeva 4, 11020
Belgrade, Serbia

Deadline for manuscript
submissions:

10 September 2025

Message from the Guest Editors

Dear Colleagues,

Long-lasting materials have become a priority in reducing the carbon footprint and mitigate climate change. Raw materials are increasingly scarce, and the product manufacturing costs are reaching unprecedented levels. In addition to new technologies with, in most cases, hazardous exposure conditions, the development of new design strategies, prevention methods, and monitoring procedures is required to fight against corrosion. Thus, corrosion control is essential for a sustainable society.

This Special Issue is intended to compile the most recent advances in corrosion research. Contributions from traditional fields such as transport, the chemical industry, or civil engineering are welcome, but innovative improvements in the areas of additive manufacturing or biomaterials are also expected.

Methods for corrosion mitigation, including environmentally friendly solutions such as high-performance coatings, cost-effective advanced materials, inhibitors, or novel solutions, as well as innovative testing procedures, including sensors or remote monitoring, to reliably assess corrosion behavior and to predict corrosion damage are encouraged.

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)
