

Fatigue and Fracture of Metallic Engineering Materials and Structures

Guest Editor:

Prof. Dr. Nicola Bonora

Department of Civil and
Mechanical Engineering,
University of Cassino and
Southern Lazio, 03043 Cassino,
Italy

Deadline for manuscript
submissions:

closed (31 July 2024)

Message from the Guest Editor

This Special Issue aims to collate original research articles and reviews that deepen our understanding of fatigue and fracture mechanisms in engineering materials and structures. In the evolving field of material science and engineering, a comprehensive understanding of fatigue and fracture behaviors under varied conditions is crucial for advancing technology and infrastructure. Submissions that delve into specific failure modes, including but not limited to impact, creep, brittle fractures, ductile failure, spall, and the effect of the stress state, are of particular interest. These investigations will provide essential insights that can contribute to the broader knowledge base of material behavior under complex loading conditions.

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compindex, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)
