

## Deformation Behavior and Mechanical Properties of High Entropy Alloys (2nd Edition)

Guest Editor:

**Prof. Dr. Linlin Li**

The State Key Laboratory of  
Rolling and Automation,  
Northeastern University,  
Shenyang, China

Deadline for manuscript  
submissions:

**31 July 2024**

### Message from the Guest Editor

As a new type of metallic material, high-entropy alloys (HEAs) usually exhibit excellent mechanical properties; thus, they have received much attention in materials science and engineering. Furthermore, because there are more metastable states of HEAs than traditional alloys during processing, corresponding mechanical properties can be obtained under different external conditions.

This Special Issue of *Metals* will focus on the microstructure, deformation behaviors, and mechanical properties of high-entropy alloys under different conditions, including but not limited to: dislocation slip and twinning, grain boundary segregation, precipitation and phase transformation, low-temperature/high-temperature deformation, corrosion, wear, fatigue, etc., as well as various methods for strengthening and toughening. The scope will cover fundamental research and all other aspects of alloy preparation, heat treatment, computer simulation, and engineering applications.

We are pleased to invite you to submit manuscripts to this Special Issue and share research results.

an Open Access Journal by MDPI

## Editors-in-Chief

### Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

### Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

## Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
