submissions:

closed (31 August 2023)

Message from the Guest Editors

Polymeric composite is a major area of interest within the field of polymers. Compounding a polymer with a secondary material, i.e. the reinforcement agent, endows it several interesting properties. There are various processing methods for the polymeric composites; however, the main challenge is desirable dispersion of the reinforcement phase in the polymeric matrix. One of the efficient reinforcement agents with a desirable dispersion ability in the polymeric matrix is the metallic material. In this Special Issue, we welcome original papers and review articles on the subject of Polymer Composites Reinforced with Metals. The focus of this Special Issue is on, but not limited to, the processing of the polymeric composites reinforced with metals, the morphological and the performances of the polymeric composites reinforced with metals, the applications of the polymeric composites reinforced with metals and a combination of these aspects.

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
