School of Mechanical and
Electrical Engineering, China
University of Mining and
Technology, Xuzhou 221116,
China

Deadline for manuscript
submissions:

31 October 2024

Message from the Guest Editor

Lasers are used in many industries, and their application in various fields is only growing with time. Laser-assisted machinery highlights how lasers have helped us reach the forefront of technology making rapid changes possible, including the improvement of metallurgical, mechanical and tribological properties, a battle many scientists throughout the world battle with to limit energy and material losses. Lasers have become a significant and impressive tool for additive manufacturing and various surface modification methods, such as hardening, melting, alloying, cladding, texturing, etc. Laser cladding and laser-aided additive manufacturing techniques offer extensive promises to accomplish preferred mechanical and tribological properties.

Challenges in laser cladding, laser-aided additive manufacturing and mechanical and tribological issues are difficult and interesting. In this new age of global interconnectivity and interdependence, it is necessary to provide the latest research outcomes, with state-of-the-art knowledge on the frontiers in laser cladding and laser-aided additive manufacturing techniques. This Special Issue is a good step in that direction.

an Open Access Journal by MDPI

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
