closed (15 August 2019)

Message from the Guest Editor

Dear Colleagues,

There is a common need in the society to understand how a material acts under different conditions. The general understanding of how local deformations at a sub-micron level influence the overall behavior of a full-size component under different loading conditions is still not fully understood. With an increased focus on safety, e.g., in infrastructure, terror security, and extreme weather, there is great interest in understanding the material behavior under both quasi-static and dynamic conditions.

With this Special Issue, I want to encourage both experimental and numerical original contributions that may elucidate the behavior of metallic materials in the range from quasi-static to dynamic conditions, and from micro scale to full-scale component testing.

Prof. Dr. Ida Westermann

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
