Deadline for manuscript submissions:

**closed (30 November 2022)**

### Message from the Guest Editors

Dear Colleagues,

Carbon neutral and peak carbon dioxide emissions are effective ways to solve the world's increasingly complex climate and energy problems. New materials, such as high-entropy alloys, new processing technologies, such as 3D printing, and online detection as well as monitoring technologies of new materials, such as online monitoring of corrosion defects of key engineering structures, are important paths to promote sustainable development. In this Special Issue, we will focus on basic theoretical research, simulation research, and experimental research of new materials, new processing technology, and application scenarios of materials. Important theoretical results and typical applications of important detection and monitoring technology of material service behavior should be given more attention.

Prof. Dr. Guoqing Gou

Dr. Qing Zhang

Dr. Gongwen Gan

## Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compindex, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)
