New Science Based Concepts for Increased Efficiency in Battery Recycling 2020

Guest Editor:

Prof. Dr. Bernd Friedrich

IME Process Metallurgy and Metal Recycling Department, RWTH Aachen University, 52072 Aachen, Germany

Deadline for manuscript submissions: closed (31 December 2020)

Message from the Guest Editor

There is no doubt that e-mobility will become a tremendous driving force for our future life. High demand for advanced materials in the batteries as well as political pressures in terms of collection and recycling rates raise the need for an extensive recovery of critical elements and a more sustainable use of raw materials. This Special Issue aims to make significant progress in designing innovative processes and understanding related mechanisms in the context of battery recycling.

The idea of a circular economy is the point of origin for contributions, aiming at minimizing of waste streams and promoting re-use/recirculation of components, functional materials as well as elements. In order to minimize material losses and energy consumption, this Issue explores concepts for optimization concerning the interfaces between mechanical and thermal pretreatments with metallurgical processes. Considering both principle aspects of circular economy and material design, the topics of special interest are those concerning recovery and re-use of critical metals like lithium, since their importance for technological applications often goes along with a lack of supply on the world market.

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure - disciplines in metallurgical field the ranging from processing. and mechanical behavior. phase transitions microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases. **Journal Rank:** JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
