Message from the Guest Editor

Dear Colleagues,

Al alloys have been consistently attracting attention and are used in extensive applications in a variety of fields due to their low density, high strength, and high specific strength. However, extended applications of Al alloys are still limited by their inadequate resistance to fatigue and corrosion cracking. Recent research and progress have been extended in several aspects. 1) Studied materials have been extended from legacy Al alloys to advanced Al–Cu–Li alloys. 2) The service environments Al alloys are exposed to has expanded to a higher risk of corrosion fatigue cracking and material failure. 3) In terms of prevention strategies, surface modifications and coatings have seen improvements in enhancing hardness, fatigue, and corrosion resistance. 4) In addition, the understanding of Al alloy corrosion fatigue behavior has significantly improved based on advanced ex situ, in situ, or operando characterizations and/or with the integration of multiscale modeling. Therefore, it is interesting to launch a Special Issue on the study of Al alloy fatigue corrosion cracking to document the recent progress and perspectives, thereby guiding future efforts.

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
