### Prof. Dr. Du-Hyeong Lee

Department of Prosthodontics, School of Dentistry, Kyungpook National University, Daegu, Korea

Deadline for manuscript submissions: closed (31 May 2019)

### Message from the Guest Editors

Dear Colleagues,

The production of metallic restorations in the dental field has conventionally been carried out using the lost wax casting technique. In the last decade, however, computeraided design/computer-assisted manufacturing (CAD/CAM) technologies have revolutionized dental manufacturing processes. The CAM milling process, which is based on subtractive manufacturing, was introduced for the production of dental restorations, together with the traditional casting technique. Thereafter, additive manufacturing was also introduced. In dentistry, these new CAD/CAM-based techniques may well replace the traditional casting technique.

We cordially invite you to submit a manuscript to the upcoming Special Issue on "Dental Alloys for CAD/CAM". The aim of this Special Issue is to advance the state of knowledge and expertise in the field of CAD/CAM dental alloys. This Special Issue will include original research articles, research articles, reviews, and clinical case reports.

## **Editors-in-Chief**

#### Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

#### Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

### **Message from the Editorial Board**

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure - disciplines in metallurgical field the ranging from processing. and mechanical behavior. phase transitions microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

# **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases. **Journal Rank:** JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
