Engineering, University of
Padova, 35131 Padova, Italy

Deadline for manuscript
submissions:

closed (31 March 2023)

Message from the Guest Editors

In the context of the industrial design process, reliable assessment of fatigue behavior is still a major concern for engineers, since the fatigue phenomenon tends to cause sudden and unexpected failures in engineering structures. These concerns especially apply to welded joints, where the presence of residual stresses and local severe stress/strain concentrations significantly affects material behavior under cyclic loading. In spite of these challenges, most structural applications require the introduction of welded joints.

The aim of this Special Issue is to provide an update to the state of the art on approaches for the fatigue assessment of metal welded joints. The topics which deserve particular interest for this Special Issue are applications to hybrid joints or joints between dissimilar materials; applications to full-scale structures and industrial details; criteria for fatigue assessment of welded joints under complex loading conditions, such as multiaxial constant, as well as variable/random fatigue loadings; the effect of residual stresses; and post-weld treatments to enhance the fatigue strength of joints.

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
