submissions:

closed (31 March 2022)

Message from the Guest Editors

Aside from ultrahigh strength and elasticity, bulk metallic glasses possess plenty of favorable thermal, magnetic, and chemical properties. For this Special Issue in *Metals*, we aspire to publish a range of articles covering (i) glass formation kinetics, liquid fragility, and thermal forming, (ii) thermal annealing and nanocalorimetry, (iii) synchrotron X-ray radiation, (iv) hydrogen storage and conversion, (v) electro/photocatalytic/corrosion activity, (vi) influence of microalloying and nanocrystallization on magnetic/electrical behavior, (vii) biostability, cell interactions, and antimicrobial properties, (viii) finite element modeling and molecular dynamics simulations of synthesis, processing, and chemical activity, and (ix) additive manufacturing, (x) miscellaneous properties on different length-scales of metallic glasses and their composites. Although mechanical properties and electron microscopy studies are not the main focus, combinatorial studies with the aforementioned topics are also welcome.

For this Special Issue, we are looking forward to receiving regular research papers, reviews, and short communications.

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
