Message from the Guest Editor

Dear Colleagues,

Basic and applied scientific research strongly linked with industrial technological developments are expected to generate the underlying knowledge needed to materialize the growth forecast for the production and use of this high-end soft magnetic material. This Special Issue of *Metals* is aimed at putting together, in a single volume, a collection of articles dealing with the most recent advances in metallurgical research aimed at increasing our understanding of the processing–microstructure–property relationships of GO and GNO electrical steels. Contributions ranging from alloy chemistry development to novel processing procedures, including strip casting, hot rolling, hot band annealing, cold rolling and primary and secondary recrystallization heat treatments are welcome. In particular, contributions on the effects of processing conditions on the evolution of the microstructure (grain size and texture) and final properties, such as magnetic susceptibility and core losses, are encouraged.

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
