### Message from the Guest Editor

Dear Colleagues,

Recent advances in manufacturing techniques have presented new possibilities for manufacturing metallic components. Industry 4.0 is the collective term for a number of technologies that are believed to have the capability to significantly increase industry productivity. While many of the technologies included will have limited influence on the fundamental physics encountered during manufacturing, others, such as 3D printing, have new physical phenomena that must be understood. More traditional manufacturing techniques such as machining can also be enhanced by the addition of sensors to equipment to monitor manufacturing in real time. Coupled with characterization techniques of modern materials, this feedback will help engineers to understand the influence of manufacturing parameters on material properties. Such links can help optimize manufacturing, without costly, large-scale trials. This Issue of *Metals* will explore how the development of Industry 4.0 in manufacturing and machining is allowing engineers new insights into the links between manufacturing, metallurgy, and performance.

## Editors-in-Chief

### Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

### Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

## Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
