Deadline for manuscript submissions:

closed (31 March 2018)

Message from the Guest Editor

Dear Colleagues,

As is well-known, foundry processes allow the obtaining of complex near net shape parts, characterized by high performance and good appearance. The properties of castings depend on different factors, as the alloy type, the use of corrective elements, the treatment of the liquid metal, the design of the mould, the process parameters, as well as heat treatment and finishing operations. Each one affects the microstructure of the component and, therefore, the final in-service properties.

The aims of this Special Issue are to present recent research and developments on casting alloys, molten metal and post processing treatments, characterization methods, and prediction models, with a particular focus on the correlation between microstructure and performance.

Hence, the different aspects related to the advances in the design, characterization and evaluation of the properties of casting alloys, based on experimental, analytical and computer simulation methods are welcomed in this Special Issue.

Prof. Annalisa Pola

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
