Prof. Dr. Haofei Zhou

School of Aeronautics and Astronautics, Zhejiang University, Hangzhou, China

Deadline for manuscript submissions:

closed (31 March 2022)

Message from the Guest Editors

Nanoscale metallic materials exhibit a range of excellent mechanical properties, including ultrahigh strength, large elastic strain limit, and high deformation reversibility. These unique mechanical properties make nanoscale metallic materials potential candidates in the applications of novel micro/nano electromechanical systems (MEMS/NEMS). A fundamental understanding of the microstructure–mechanical property relationship of nanoscale/nanostructured metallic materials, especially at the atomic scale, is of both scientific and technological significance for the development of damage-tolerant metallic nanomaterials and devices. Recent developments of atomistic simulations and in situ nanomechanical testing/manipulation provide great opportunities to investigate the mechanical behavior of nanoscale metallic materials.

This Special Issue focuses on recent advances in the microstructure and mechanical properties of nanoscale metallic materials/devices, involving experimental, theoretical, and computational investigations. Reviews and articles on various aspects of microstructures, mechanical property, deformation mechanism, and nanomechanical testing methodology are welcomed.

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
