

## Special Issue

# Fatigue, Fracture and Hydrogen Embrittlement Behavior of Metallic Materials

### Message from the Guest Editor

The use life of structural materials is to a large extent influenced by their service conditions, particularly in the coupled effect of cyclic load and corrosion environment. In the last several decades, there has emerged a huge number of new studies on fatigue and environmental fracture of metallic materials based on the development of new theories, testing techniques, and experimental phenomena. For example, multi-mechanical behaviors of various structural materials were explored in hydrogen-related engineering because of hydrogen as a potential clean energy carrier in the future. Advanced materials such as high-entropy alloy also inspired the interest of metallurgists in the world, focusing on their failure behavior as well as service properties. With a new view on this aspect, our Special Issue aims to seek a wide set of articles on the topic of fatigue, fracture, and hydrogen embrittlement of metallic materials, and we hope this issue can offer an excellent platform for metallurgists and material/mechanical scientists to discuss the latest progress in this field.

## About the Journal

### Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei  
Compendex, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Metals and Alloys)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 18.7 days after  
submission; acceptance to publication is undertaken in 2.7  
days (median values for papers published in this journal in  
the second half of 2025).
