

## Special Issue

# Microstructural Engineering in Metallic Materials

### Message from the Guest Editor

Developing high-performance engineering metals is one of the practical solutions to many of today's industrial challenges. Tailoring (engineering) the microstructure is an indirect but effective way of optimizing the properties of metals. This includes a range of length scales from the atomic level to the nano/micro/millimeter scale. The characteristics of other microstructural constituents such as dispersoids or secondary phases also affect the material behavior in various working conditions. This Special Issue will gather and present the latest achievements in theoretical (modeling and simulation) and experimental studies of microstructural engineering in metallic materials. The issue covers all related processing routes, including metal casting, forming, joining, powder technology, etc. Studies that include advanced metallic materials such as medium- and high-entropy alloys as well as advanced characterization techniques such as atom probe tomography or analytical microscopy (EBSD, EDX, EELS, etc.) are particularly welcome. An appropriate submission to this Special Issue should include an analysis of the structure–property–processing relationship in metals.

## About the Journal

### Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei  
Compendex, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Metals and Alloys)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 18 days after  
submission; acceptance to publication is undertaken in 2.6  
days (median values for papers published in this journal in  
the first half of 2025).
